

Sub A4

organizing a merchant server network providing electronic access thereto by a plurality of participating merchants offering pre-approved products for purchase;

establishing a purchaser server network electronically coupled to the merchant server network for real time information communication providing terms and conditions of purchase;

said manipulating step including allowing specific particulars to be editable by the participating merchants whereby resultant terms and conditions are viewed by the potential purchaser;

completing a purchase transaction by the purchaser entering a locality identifier to retrieve options from participating merchants for payment and pick-up in the preferred locality.

2. The method defined in Claim 1 wherein:

said organizing step includes establishing a merchant ID by coded password for an Internet file protection in real time.

3. The method defined in Claim 2 wherein:

said completing step includes releasing selected pre-approved product to the purchaser upon presentation of identifying password, ID form and e-mail receipt in order to match the purchaser with the selected pre-approved product, purchase transactions and participating merchant.

4. The method defined in Claim 3 wherein:

said establishing step for a product pick-up network further includes reception of purchased terms and conditions from the purchaser via the server product network and for handling the purchase transaction with the participating merchants before communicating the transaction to the pick-up location.

5. The method defined in Claim 4 wherein:

said establishing of the purchaser server network includes display of individual product search box interrogated by potential purchaser employing zip code identifier.

240  
6. The method defined in Claim 5 including the step  
of:

generating a results page derived from a web page  
showing a choice of merchants having the pre-approved product  
near the zip code identifier.
